## Rainwater Harvesting

Leaf Blaster Gutterguard is widely used in rain-water collection because of its ability to keep out leaves, pine needles and roof sand-grit from the gutter and rainwater collection tank.

Rainwater travels down roof and into the gutter through the fine stainless steel mesh of Gutterguard. Then travels through the conveyance tube to the water collection tanks.

The conveyance tube is slanted towards the rainwater collection tanks so the tanks can fill up with clean fresh rainwater.

Three separate 5,000 gallon rainwater collection tanks can harvest a total of 15,000 gallons of rainwater. The rainwater is used by a homeowner to irrigate his drought tolerant plants in his landscape around his home.

## Leaf Blaster

### Gutterguard

NO MORE GUTTER CLEANING EVER!

Filters even roof sand grit!

# Installs On Any Roof

Asphalt Shingle

Corrugated Metal

Asphalt Shingle

Standing Lock Metal

Villa Tile

Membrane

Wood Shake

Flat Tile

## Installation

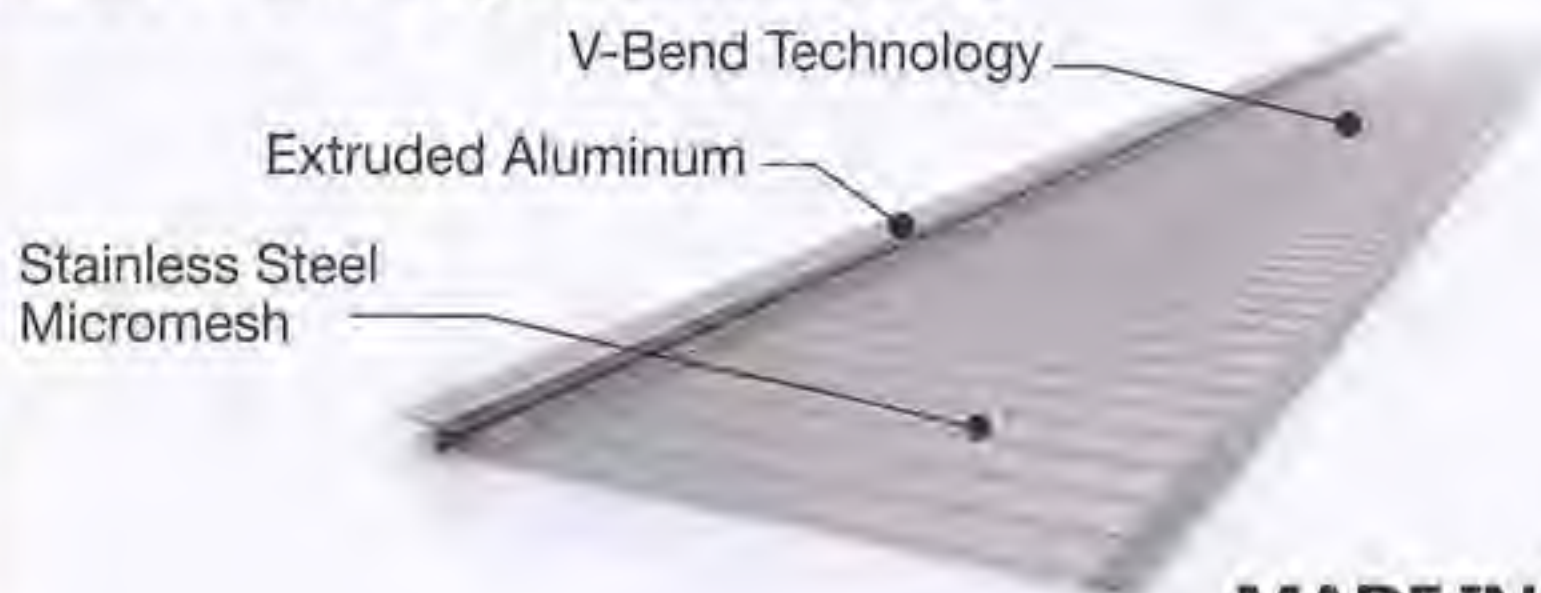

There are two methods to choose from when installing  
You can screw it on OR tape it on!

## Bending Mesh

## Made From Superior Materials

**MADE IN USA**

With US and Imported Parts  
Fully Assembled in the US

## KEY BENEFITS

Eliminates gutter cleaning forever!

Keeps out leaves, pine needles and sand grit!

Fits on virtually any gutter and roof type!

Your gutters will never clog!

Handles over 150 inches of hourly rainfall!

Translucent appearance blends with your roof!
